

Dräger Air Flow Tester

Air Flow Indicator

Air flow test tubes can be used universally: Simple and easy to use for the identification of air flows movements.

Benefits

Quick information

In many fields, such as mining or industry, it is very important to detect even the smallest air flows, in order to quickly and reliably evaluate the possible diffusion of dangerous substances. With the air flow test tubes, the source, direction and speed of the air flow are visible immediately.

Simple to use

Smoking sulfuric acid is located in the tubes. When the top of the tube is opened, a small rubber ball is used to pump air through the tube. This creates visible white smoke, which is carried on any existing air flows.

All-purpose

The air flow test tubes can be used until the "white smoke" has completely disappeared. If the test is completed before all the smoke disappears, the tube can be sealed again using the rubber cap provided.

Ordering Information

Dräger air flow test tubes

Air flow test tubes	10	CH25301
Set of flow testers for air including 1 package of air flow test tubes, inflation bulb and rubber caps	1	CH00216
Additional Dräger-Tubes upon request.
